JUMBO OFFSHORE

OFFSHORE WIND

Integrated T&I Solutions

www.jumbomaritime.nl

Who We Are

With roots dating back to 1968, Jumbo has built a strong reputation for delivering complex offshore and heavy lift projects worldwide. Today, Jumbo Offshore is a leading offshore installation contractor, providing integrated transport & installation (T&I) solutions for the global offshore wind industry.

Operating two DP2 installation vessels, we combine in-house project management and engineering with experienced marine and construction crews to deliver projects efficiently, reliably, on time, and with safety as our top priority. Our expertise includes the installation of transition pieces, secondary steel structures, and jacket pin piles, supported by a proven track record spanning hundreds of foundations for some of the world's largest offshore wind farms.

As today's offshore wind farms become tomorrow's decommissioning projects, Jumbo Offshore is ready to support their full lifecycle. Combining extensive offshore expertise with proven marine transportation capabilities, we deliver safe, efficient, and environmentally responsible decommissioning solutions that minimise risk and maximise operational excellence.

With the industry moving farther offshore and into deeper waters, we continue to innovate. Leveraging decades of subsea installation experience, we are developing unique mooring and hook-up solutions that support the next generation of floating offshore wind projects.

Built on experience. Driven by innovation. Ready for the future of offshore wind.

Fixed Wind: A Firm Foundation

The installation of fixed offshore wind foundations is a core activity for Jumbo Offshore.

Our scope includes:

- Loadout of transition pieces, secondary steel, pin piles, and piling template at fabrication yard
- Transportation of clients' equipment to marshalling yard, if required
- Marshalling yard operations and activities
- Loadout of clients' equipment to installation vessel
- Transportation to site and offshore installation
- Completion works

Decommissioning: An Eye on the Future

Today's installation projects become tomorrow's decommissioning projects. While offshore wind farms typically operate for several decades, the lifespan is finite. As turbines continue to grow larger and more powerful, Jumbo Offshore is committed to maintaining the expertise, assets, and personnel necessary to conduct full-scale offshore wind farm decommissioning – reliably and efficiently.

Our scope of work in decommissioning projects covers:

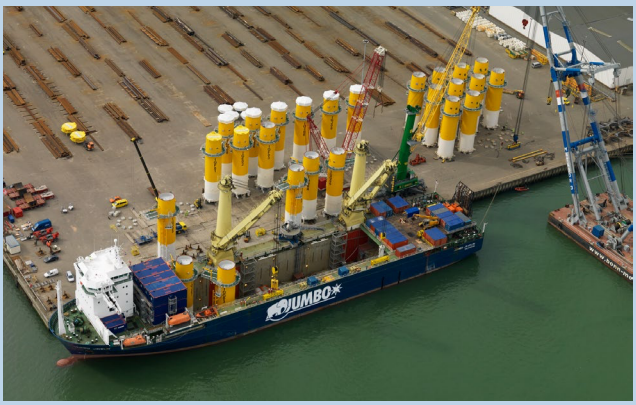

- Project management and engineering
- Removal of (subsea) structures
- Transportation to the location of disposal

At Jumbo Offshore, we are committed to minimising environmental impact while maximising safety and efficiency throughout the decommissioning process.

Marshalling Yard Operation and Management

In offshore wind projects, the effective management and operation of the marshalling yard are critical parts of the overall logistic chain. Jumbo Offshore offers clients a wide range of operational support through its network of trusted subcontractors, covering everything from land and yard rental to complete logistic operations.

Floating Wind: Into Deeper Waters

As the floating wind industry enters a new phase of commercial scale deployment, Jumbo Offshore is uniquely positioned to support its growth. Combining extensive experience in mooring installation and offshore wind projects with over five decades of expertise in marine transportation and logistics, we develop smart, integrated solutions that simplify offshore operations. Our approach enhances safety, reduces complexity, and minimises both project risks and lifecycle costs.

Our DP2 heavy lift crane vessels (HLCVs) are optimally designed and equipped for the installation of various types of mooring systems. And together with our partners, we offer a total floating WTG installation solution from mooring pre-lay to hookup.

Sustainability:

Responsible Business, Long-Term Value

At Jumbo, sustainability is integrated into our business strategy and day-to-day operations. Sustainability is one of our core values, guiding how we manage environmental, social and governance considerations across our business. By focusing on safe operations, reducing our environmental impact, and creating long-term value for our clients, employees, partners and communities, we contribute to a more sustainable maritime industry.

Safety:

Integral to Everything we do

We believe that all incidents can be prevented. Safety awareness is an integral part of everything we do, whether onshore or offshore. Since 2005, we have operated our very own Stay Well safety programme, a firm foundation for our safety-driven culture. Ours is a working environment where transparency and participation are welcomed in pursuit of our goal to get everyone safely home. Employees are encouraged to stop work immediately should they encounter a situation that makes them feel unsafe.
